Technology Innovation and Data Supervisor Naples Beach Club, a Four Seasons Resort

Dear Hiring Manager,

I'm excited to apply for the Technology Innovation and Data Supervisor position at Naples Beach Club. As an Old Naples resident living just 2 miles from the resort, I'm thrilled at the opportunity to combine my technical support expertise with my hospitality industry background to support Four Seasons' legendary standard of excellence.

What makes me uniquely qualified for this role is my combination of hands-on IT experience and deep hospitality industry roots. I spent many years working in bars and restaurants, where I developed an understanding of service standards, operational pressures, and the critical importance of maintaining professional relationships while solving problems under pressure. This experience taught me that in hospitality, technology isn't just about systems running smoothly, but, it's about ensuring seamless guest experiences and supporting staff who are focused on service excellence.

Over the past 4+ years, I've built substantial technical credentials through enterprise tech support roles and self-directed learning. At SimpleCast Podcast Hosting Company (acquired by Sirius XM), I delivered technical support to 100+ enterprise clients using Intercom and Zendesk, consistently meeting SLA targets while managing complex technical escalations. More recently, I've gained hands-on AI systems administration experience managing production VPS infrastructure, including server deployment, OS updates, network configuration, database administration, and 24/7 monitoring of mission-critical applications.

I understand that the preferred qualifications mention MCSE or network certifications, which I would be working towards if hired. What I bring instead is proven ability to learn quickly, troubleshoot effectively, and translate technical concepts for users at all skill levels as demonstrated through creating 1,800+ tutorials and supporting over 40,000 subscribers & followers. I'm committed to obtaining the formal certifications that will strengthen my technical credentials while contributing immediately through my problem-solving skills, hospitality mindset, and support experience.

The opportunity to support Naples Beach Club's PMS, POS, PABX, HSIA, and call accounting systems appeals to me because I understand the "why" behind the technology. These aren't just systems, they're the backbone of guest satisfaction and operational excellence. My combination of hospitality understanding and technical capability positions me to effectively support both staff and guests while maintaining the standards Four Seasons is known for.

I'm ready to contribute from day one, eager to grow into this role, and excited about the possibility of bringing my unique background to your technology team. I would welcome the opportunity to discuss how my hospitality experience and technical skills can support the exceptional service standards at Naples Beach Club.

Thank you for your consideration. My resume is attached, and I look forward to speaking with you soon.

Best regards,

Michael J. Murphy
