PROFESSIONAL SUMMARY

Technical support professional with 4+ years of enterprise B2B support experience and deep hands-on expertise across the modern LLM and AI agent stack — including RAG systems, LLM deployment, vector databases, and workflow orchestration. At SimpleCast (acquired by Sirius XM), served as a senior technical escalation point for 100+ enterprise clients, collaborating directly with engineering and product teams on complex platform issues. In parallel, built and documented production AI systems using LangChain-adjacent tools (n8n LangChain nodes, Ollama, PostgreSQL/pgvector, OpenAI/Anthropic/Gemini APIs), and delivered real-time technical support to a developer audience of 41,500+ subscribers. Combines deep platform intuition with clear written communication and a high-ownership approach to getting customers unblocked fast.

EXPERIENCE

AI Platform Technical Educator & Developer – Mike Murphy, LLC (2015 – Present)

- Delivered real-time technical support across YouTube, social, and email channels to a developer and creator audience — debugging API integrations, LLM deployment issues, n8n workflow failures, and RAG pipeline errors with 100% response rate.
- Built and maintained production AI systems using LangChain-adjacent tools: n8n (with built-in LangChain AI nodes), Ollama LLM deployment on VPS, PostgreSQL/pgvector (Neon managed), OpenAI / Anthropic Claude / Google Gemini API integrations, and Streamlit frontends.
- Created 25+ technical tutorials on RAG systems, LLM deployment, API configuration, VPS infrastructure, and Docker — functioning as detailed runbooks that reduced repetitive support questions through proactive documentation.
- Managed Docker Compose deployments across multiple services (n8n, Ollama, Streamlit, Traefik reverse proxy with SSL) on Hostinger VPS — diagnosing networking, service health, and configuration issues.
- Tested and documented API integrations for OpenAI, Anthropic, Google Gemini, and Ollama using Postman and curl; created step-by-step guides for API key generation, credential management, and endpoint testing.
- Authored structured troubleshooting guides covering common failure modes: model-not-found errors, Postgres connection/SSL issues, webhook misconfigurations, and Docker network isolation problems.

Senior Technical Account Manager – SimpleCast + Sirius XM (2018 – 2022)

- Served as the senior technical escalation point for 100+ enterprise clients on a B2B SaaS platform — diagnosing and resolving complex issues across podcast hosting, RSS distribution, analytics pipelines, and third-party integrations.
- Coordinated directly with engineering and product teams via Jira, Asana, and Slack to surface bugs, advocate for customer needs, and track resolution through to deployment.
- Managed technical onboarding post-acquisition (Sirius XM), creating knowledge transfer documentation, video tutorials, and customized support materials to reduce onboarding friction and case volume.
- Used Intercom and Zendesk to manage support queues, maintain SLA compliance, and track recurring issue patterns — feeding insights back into product and documentation teams.
- Led client communications during platform incidents, including root cause summaries and follow-up documentation aligned with post-mortem practices.

Studio Manager – Heather Donlan Photography (2007 – 2016)

- Served as the primary technical resource for a busy studio — diagnosing and resolving IT, workflow, and web platform issues (WordPress) to maintain operational continuity.
- Managed integrations across Adobe Creative Cloud, Google Workspace, and FreshBooks, developing self-taught expertise across multiple platforms through hands-on problem-solving.

EDUCATION

- **Masters in Law Administration** University of Denver School of Law (2005 – 2007) GPA: 3.98
- **B.A. English (Cum Laude)** Univ. of Massachusetts-Amherst (1988 – 1992) GPA: 3.35

SKILLS

- **LLM & AI Platform Stack:** RAG systems, LangChain ecosystem (n8n LangChain nodes), Ollama LLM deployment, OpenAI API, Anthropic Claude API, Google Gemini API, Prompt Engineering, Vector Embeddings (nomic-embed-text, sentence-transformers)
- **Infrastructure & DevOps:** Docker / Docker Compose, VPS Hosting & Management (Hostinger), Traefik reverse proxy, SSL/TLS configuration, Linux package management, firewall configuration (UFW)
- **Databases:** PostgreSQL / pgvector (Neon managed), vector store operations, schema management
- **Development & APIs:** Python (RAG implementations, scripting, test suites), REST API integration, Postman (API testing), curl, GitHub, Streamlit
- **Workflow & Automation:** n8n (workflow orchestration, LangChain AI nodes, webhook debugging), workflow ingestion/query pipeline design
- **Support Tooling:** Intercom, Zendesk, Asana, Jira, Trello, Slack
- **Documentation:** Technical runbook authoring, video tutorial production, knowledge base creation, post-incident write-ups
- **Core Competencies:** Enterprise escalation handling, API/SDK troubleshooting, technical written communication, remote async collaboration, self-directed learning, high ownership

FEATURED PROJECTS

CV-RAG: Production RAG System on LangChain-Adjacent Stack

Built an end-to-end RAG system for semantic search over resume content. Deployed using n8n's built-in LangChain nodes (Embeddings Ollama, Postgres Vector Store, Ollama Chat Model) — the same primitives LangChain exposes directly. Debugged production issues across vector ingestion, embedding dimension mismatches, webhook configurations, and Docker networking across three interconnected Compose services. **Tech Stack:** n8n (LangChain nodes), Ollama (nomic-embed-text + llama3.2), PostgreSQL/pgvector (Neon), Streamlit, Docker Compose, Traefik.

Self-Hosted AI Infrastructure

Manages a production VPS environment running Ollama LLM models, n8n automation, and PostgreSQL — all on a shared Docker app-net network with Traefik handling SSL termination. Troubleshooting experience spans Docker networking, model availability errors, service restarts, and zero-downtime update procedures. Documented as a tutorial series covering full deployment lifecycle.

Chat History RAG System

Built a custom RAG pipeline to semantically search personal AI conversation history — including embedding strategy, chunking design, retrieval tuning, and LLM prompt formatting. Featured in tutorial "How I Built a RAG

System to Mine My AI Chat History for Gold." **Tech Stack:** Python, vector embeddings, PostgreSQL/pgvector, LLM integration.

CREATIVE & PERSONAL INTERESTS

- Audio production, photography, and videography
- Writing, storytelling, and podcasting (155+ episodes)
- Exploring AI tools for creative workflows
- Completed the Camino de Santiago pilgrimage (654 miles, 39 days)
